

Quick guide

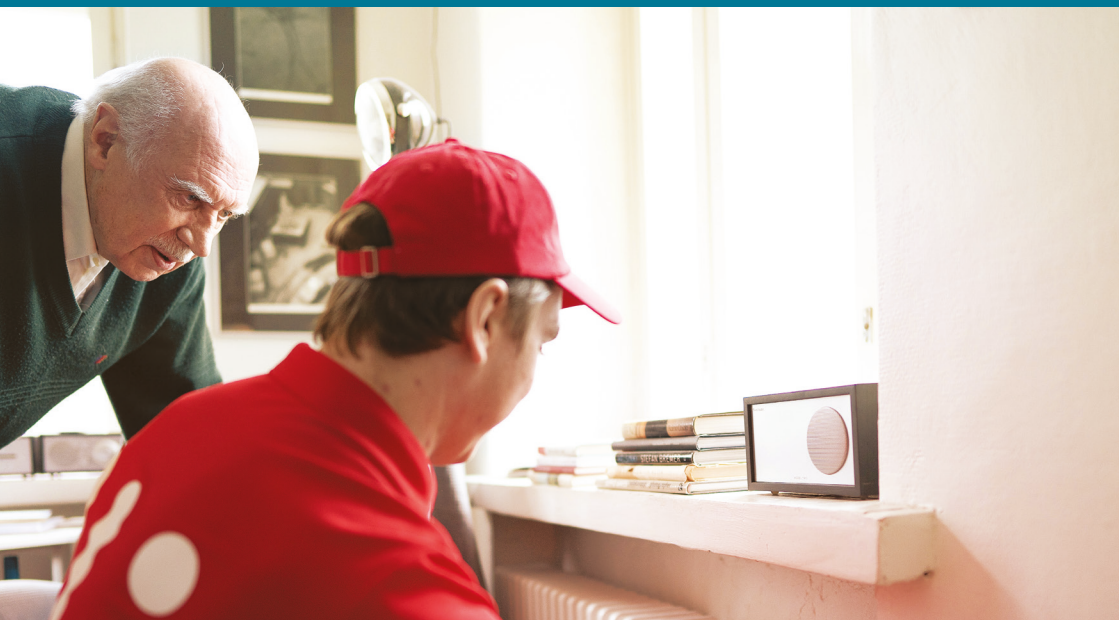

Wattinen optimizes the heating of this property with smart thermostats connected to the service. The service keeps the heating of the property stable and works automatically in the background, reducing energy and climate emissions. It also provides residents with an easy way to adjust the temperature either directly from the thermostat on the radiator or with a smart phone app.

Heating now works more efficiently than before

The radiator may feel cold in your hand if the room temperature is already high enough compared to the target temperature. This is how the thermostat should work. When the room temperature decreases enough, the thermostat will open the radiator valve and the radiator will start heating up again. The new smart thermostats react faster than the old ones. This means that the radiator cools and heats up more efficiently and it can sometimes feel cold in your hand. This saves energy. It is also normal for the top part of the radiator to be warm but the lower part to be cool.

At the recommended temperatures, the residents' energy levels remain high and the indoor air quality is good. Motiva's recommended temperatures for home are:

- living areas 20–21 °C
- bedrooms 18–20 °C

Adjusting temperature with the thermostat

You can adjust the temperature by turning the outer ring of the thermostat until you see the target temperature on the display. The adjustment is room-specific, meaning that if you adjust the room temperature from one thermostat in the room, the other thermostats in the room will adjust accordingly.

Adjusting temperature with the smartphone app

Many convenient additional functions for temperature setting can be found in the Wattinen smartphone app. For example, you can activate the “away” mode with a single click when leaving the house for several days, saving energy when the apartment is empty. In the app, you also conveniently see the climate impacts caused by temperature drops and energy savings in your apartment. For examples of how to use the app, please find instructions on the webpage wattinen.fi/asiakaspalvelu

You can download the Wattinen app from App Store or from Google Play. You can access them directly with the QR-codes below. Point the camera of your mobile phone at the QR code and tap the icon showing on the screen.
